

APTECH's Equipment Life Optimization Program

Does your Power Plant suffer from:

- ☑ Reduced Capital and Maintenance Budgets?
- ☑ Reduced Inspection/Condition Assessment Budgets?
- ☑ Lower Staffing and Technical Support?
- ☑ Component Reliability Problems?
- ☑ Lingering Safety Risks?
- ☑ Component Design Problems & High OEM Costs for Fixes?
- ☑ Adverse Impacts of Environmental Upgrades?
- ☑ Increased Requirements to Cycle or Lower Minimum Loads?

Equipment Life Optimization Program (ELOP) helps plant owners and managers effectively address these problems while meeting market or contract reliability needs.

APTECH staff teams with your in-house maintenance managers on each activity shown in the circle flowchart below. Our approach is to provide high level technical support as needed at each plant minimizing overall costs. We help plant owners reduce capital replacement and repair costs by identifying the causes of component damage, and developing *creative* low-cost methods to mitigate both the damage and it's consequences. We also develop cost-effective methods to implement repairs and replacements. APTECH has developed methods to better focus inspections of many plant components reducing the number of locations, frequencies, and overall costs of inspections.

What clients say: "This program focuses resources where you can get the best bang for the maintenance buck, which is now more limited. I can use APTECH to get information on current technologies, and industry trends, and they keep my stuff proprietary."

APTECH's ELOP clients benefit by having highly qualified technical staff immediately available as problems arise, reducing forced outage hours and extensions to planned outages.

We can work with clients on an alliance basis, including sharing of costs and benefits of specific projects. To learn more about APTECH's ELOP Services, please contact:
